

PL-7008

Create agents in Microsoft Copilot Studio

PL-7008 Course schedule

Introduction

1. Get started with Microsoft Copilot Studio
2. Design agent conversations using topics in Microsoft Copilot Studio
3. Build intelligent agents in Microsoft Copilot Studio
4. Add structured automation to agents in Microsoft Copilot Studio

3.

Build intelligent agents in Microsoft Copilot Studio

Learning Objectives

After completing this module, you will be able to:

- 1 Create and configure an agent to use generative AI
- 2 Add knowledge sources to an agent
- 3 Configure knowledge sources for generative answers

LLM

→ Fine Tuning

Add knowledge to an agent

Knowledge sources

Work with generative answers

- Add public and enterprise data sources
- Agent will be able to dynamically generate multi-turn answers in real time using your enterprise data
- Allows you to create an immediately useful agent

Copilot Studio Agent Guide Overview Knowledge

+ Add knowledge

All **@ Dataverse** **Files** **Public website** **SharePoint**

Name	Type	
Copilot Studio Documentation	Public website	
Documents	SharePoint	
Microsoft Copilot Studio - Implem...	Files	
Machine Order	Dataverse	

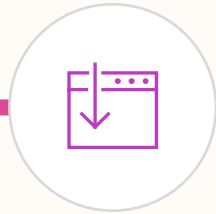

Knowledge sources

- Use cases for knowledge sources

Public Website

Searches the query input on Bing, only returns results from provided websites

SharePoint

Connects to a SharePoint URL, uses GraphSearch to return results

Dataverse

Connects to a Dataverse environment and uses Retrieval Augmented Generation (RAG) technique in Dataverse to return results

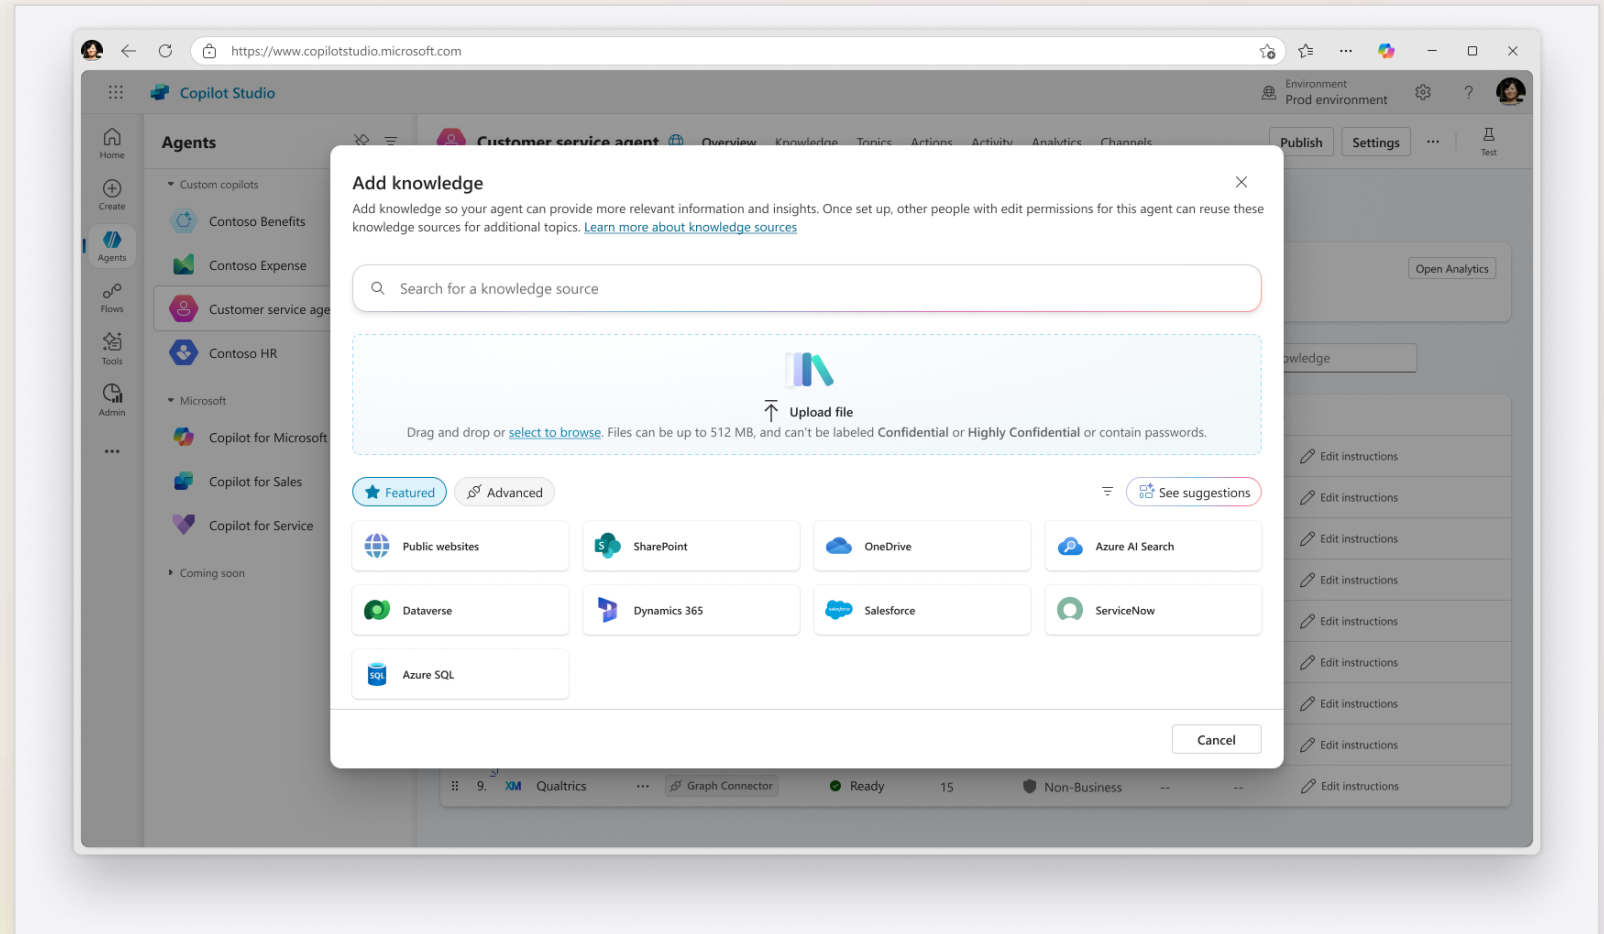

File Upload

Searches uploaded documents, returns results from the document contents

Knowledge sources

Supported knowledge sources

- File uploads
- SharePoint / OneDrive
- Public websites
- Azure AI Search
- Microsoft Dataverse
- Bing custom search
- Power Platform Connectors
- Copilot connectors
- and more

How agents use knowledge

Settings

Generative AI

- Agent details
- Security
- Connection Settings
- Authoring Canvas

Knowledge

Allow ungrounded responses

Manage whether your agent can respond using only general knowledge. Selecting Off will block responses that don't use knowledge sources or a tool, including responses that refer solely to context from the active conversation. [Learn more](#)

☒ On

Use information from the Web

Let your agent browse the Web using Bing Web search. [Learn more](#)

☐ Off

Specific Knowledge Sources

- Generates answers based on knowledge sources added to the agent

General knowledge (Allow ungrounded responses)

- Uses the model's own general knowledge when knowledge sources don't answer
- Can be turned off

Web search

Using websites as knowledge sources

URLs redirecting to another top-level site are not supported

For example, if www.fabrikam.com redirects to www.contoso.fabrikam.com, your agent will not generate responses

Websites that require authentication, or that aren't indexed by Bing, can't be used.

For example, an internal site that requires authentication, such as fab.visualstudio.com/project/ wiki cannot be used.

URL can have up to two subpaths

A trailing forward slash, however, is allowed

For example:

www.fabrikam.com/retail/stores/

Not:

www.fabrikam.com/retail/stores/us

Using documents as knowledge sources

- Documents can be uploaded as a knowledge source
- Documents are stored securely in Dataverse, and indexed for efficient search
- Document contents are visible to all agent users regardless of file permissions or access controls
- Up to 500 files can be uploaded as knowledge
- File size is limited to a max of 512 MB
- Text-based files are recommended, but there are a broad range of supported file types
- Image, audio, video, and executable files are not supported

Using documents as knowledge sources

- Uploaded files are automatically indexed
- Indexing may take several minutes and the documents will not be used until the Status is set to Ready.

Generative answers

Use knowledge for generative answers

Generative answers

- Find answers without topics
- Can use generative answers as the primary information source, or as a fallback when topics cannot answer a question
- Generative answers use knowledge sources as **grounding data**

Query

What are Copilot Studio agents and how can I find out more about them?

Use knowledge for generative answers

Generative answers node

- Allows you to specify more sources that the node searches based on your inputs
- These sources override sources at the agent level
- Generate answers node is included by default in the **Conversational boosting** topic

Use knowledge for generative answers

Generative answers node properties

- Add knowledge
- Restrict knowledge
- Web search
- Allow the AI to use its own general knowledge
- Content moderation level
- Save LLM response

The screenshot shows the 'Create generative answers' node in a workflow editor. The node has a title bar with a refresh icon and a menu icon. Below the title bar is an 'Input' section with a text field containing '{x} Activity.Text string'. Below the input field is a 'Data sources' section with a globe icon and an 'Edit' link. The node is connected to other parts of the workflow via arrows with plus signs.

Lab 3: Manage knowledge in Copilot Studio agents

Module Recap

In this module, we:

Learned how to configure generative AI

Learned how to add knowledge sources

Learned how to configure generative answers
